

Designed for your peace of mind, Switchvox version 4.6 helps you protect your Switchvox systems, while streamlining tech support, updates, and backups.

A few of the highlights of Switchvox SMB 4.6 include:

- **Helps you protect Switchvox**
 - Automatic IP blocking denies a network connection to IP addresses that have repeatedly tried to reach Switchvox with bad login information
 - Requiring strong passwords means that outsiders won't be able to easily discover valid login information
- **Makes it easier to manage Switchvox**
 - A new Switchvox tech support access tool is available, so you don't have to make changes to your firewall
- **Choose the timing for your software updates**
 - You can download the update and then apply it at any time, or you can download and apply it at the same time. You choose!
 - A progress-indicator lets you know how the download is doing.
 - Once you apply an update, all previously downloaded update-files are removed.
- **Backups are easier – files are now segmented**
 - If your backup will be larger than 2GBs, Switchvox automatically segments it into multiple files. You can easily upload a multi-file backup using its 'meta' file.
 - A progress-indicator lets you know how the download is doing.
 - Call Recordings have their own settings that let you automatically save the files to an FTP server.

About Digium and Switchvox

Digium has been shaking up the world of proprietary telecom since we invented Asterisk, the world's most success open source telephony project. Switchvox is the award winning Unified Communications system that is built on the Asterisk open source communication platform, providing SMBs with an affordable, feature-rich UC system that is more than an IP-PBX. It's a better way to communicate.
