Telemedicine: Patient Intake And Collection Of Medical History In Hospitals And Medical Clinics/Offices In The Wake Of Pandemic

A few months ago, the term “social distancing” would have sparked understandable confusion as to its meaning. But social distancing has now become a reality in wake of the COVID-19 pandemic. Medical personnel are on the frontlines of this pandemic and are dealing with an influx of admissions which can require extensive questioning regarding health history.

How to keep staff safe during patient intake? **Telemedicine**. Telemedicine is a way to interact with and collect patients’ medical history via an audio or video feed, reducing risk of exposure to medical staff caring for patients.

Pair the SIP h.264 Video Intercom in a flush mount kit in an exam or intake room with an h.264 Video phone in a different room for intake and medical history of patients.

Setup the SIP H.264 Video Intercom in Peer-to-Peer mode and have the video displayed on your PC with a soft phone client. Free download of **CyberSoftPhone** available from CyberData.
