

work easier.
sound better.

VXi X100 and X200 USB Adapters

Natural, high-quality audio performance
on your computer

Natural sounding conversations

The VXi X100 and X200 USB adapters are designed specifically for VoIP, speech recognition and softphone applications where voice quality is of the utmost importance. When used with your existing professional-grade headsets, they deliver superior call quality on your computer that sounds the same or better than traditional phone systems. Wideband audio allows more of your voice to be heard, resulting in a more natural sounding audio experience. Conversations become shorter because information doesn't need to be repeated, reducing listener fatigue and increasing productivity.

Superior call quality

Optimized for Unified Communications (UC), the X200 USB adapter incorporates all the functionality of the X100 as well as an enhanced feature set. The X200 includes echo cancellation and Digital Signal Processing (DSP) – essential attributes for eliminating the most persistent issues that can affect voice quality when using VoIP.

Plug-and-play design

The X100 and X200's plug-and-play design provides fast and easy set-up. There is no need to install drivers, no down time and no need for technical support. The small footprint of the adapters and coil cord design creates a portable device that allows users to switch easily between a laptop and a desktop computer.

Designed for now and the future

You can improve call quality and productivity even if your company is not using UC yet. Your business can benefit from the X100 and X200 today, and you can have confidence in a future-proof investment that will enhance UC deployment when the time is right.
