

## Parking Pro

With Park Pro, you're no longer limited to one parking lot. You can add multiple parking lots to your PBX. This is useful for companies who run multiple locations on the same server or have multiple internal departments.

## Park & Announce Feature

The Park & Announce feature automatically announces parked calls to phones in a page group that you define. The system announces which slot number the user should dial to pick up the parked call. Any user on the system can pick up the parked call. Optionally, the caller can leave a brief message that will be played as part of the announcement. This can be useful for announcing the caller's name or other information you request from the caller.

## **Features**

- Create multiple parking lots
- Announce parked calls to a page group
- Allow callers to record a message to be played to the page group
- Control the maximum message length as well as the instructions played to the caller
- Prepend the parked call's caller ID with text and/or the parking slot number
- Play up to three system recordings along with a parked call announcement
- Drag and drop the elements of a parked call announcement (system recordings, slot number, and caller message) to change the playback order
