CounterPath

Data Sheet | Stretto™ Collaboration

Key Features

- HD video conferencing, screen sharing and instant messaging in one virtual meeting room
- Supports conferences with up to 200 participants
- Easily integrates with existing infrastructure
- Feature-rich host capabilities for managing participants and presenters
- Participants can join from the device of their choice using Bria or a web browser
- Highly secure, encrypted communications

Key Benefits

- Provides collaboration tools that can be used over any network, with any device and from any location
- Future-proof UC investment that requires no significant changes to existing infrastructure
- Enables a diverse workforce to effectively and efficiently collaborate, with the flexibility to choose a variety of UC features to suit their communications preferences

## Looking for a Virtual Meeting Solution? Look no further!

CounterPath's Stretto Collaboration seamlessly integrates a virtual meeting room with secure HD audio and video conferencing, messaging, and screen sharing for up to 200 participants within the Bria softphone experience. It extends your telephony system capabilities without significant changes to communications environments, even when using a PBX that does not support video or messaging, because these services are hosted by CounterPath. Stretto Collaboration builds upon CounterPath's 15+ years of softphone experience and can be added to Bria Enterprise and custom Bria solutions.

Increase Productivity in the Workplace

The need for real-time collaboration increases significantly as teams grow and companies adopt more remote/home-based work initiatives. Stretto Collaboration allows interaction through multiple channels. For instance, a host can escalate an IM conversation to a full video conference with a simple click, or share a document on their screen while presenting it live via video conference, giving attendees virtually the same feeling they would have as being in the same room. Participants can ask questions in real-time, and receive answers, collaborating properly to make business decisions faster and complete projects on time.

Save Money by Traveling Less & Working More

Think of how much time and money is wasted when team members are forced to travel for work. With Stretto Collaboration, employees can work together and engage customers from any location using HD video, chat and screen sharing, all but eliminating the need for travel. Less travel means more money saved, and less downtime when travelling means higher levels of productivity.

Data Sheet | Stretto™ Collaboration

Features

Start or Schedule with a Simple Click

Start a collaboration session quickly and easily, or add it to an Outlook calendar invite, without entering pin codes, conference IDs, or passwords.

Meet on Any Device, Anywhere

Join or run meetings from wherever you are, on the device that works best. Hosting and presenter capabilities are supported on any device that has Bria installed, and participants can join either using Bria or a web browser.

Conferences That Are Easy to Join

Whether on desktop or mobile, participants can easily join via Bria, web link or dial in by phone to join a conference.

Dedicated Meeting Room

Never overbook a virtual conference room again! Each user is provided with a dedicated virtual meeting room, making it easy to schedule meetings on the fly, or recurring meetings, without having to check for overbooking.

HD Video and Content Sharing

Easily and intuitively share video and content with colleagues, customers and peers in up to 1080p HD video.

Group and Private Chat

Send and receive instant messages to everyone in the group or a single participant in the conference.

Feature-Rich Host Capabilities

View and manage participant capabilities such as assign video, presenter control, turn mic on/off, room-wide muting and unmuting, and lock participants from changing mute setting.

Personalize Your Virtual Room

Video layout, quality and camera selection can be changed quickly during a live session.

Check Attendance

The participant list shows other conference members who are attending or have recently joined or left the session. It also depicts voice activity and audio detection below the conference member's avatar.

Network and Local Recording

Network recording can be set up for the host to record both audio and video of the conference. The audio portion of a conference can be recorded locally by any participantin the conference.

Host Secure Meetings

Designed to meet even the most stringent security requirements, all sessions are encrypted via TLS and SRTP for securing media and audio streams, and HTTPS for screen sharing.
