SD-WAN @ Home

simplewan
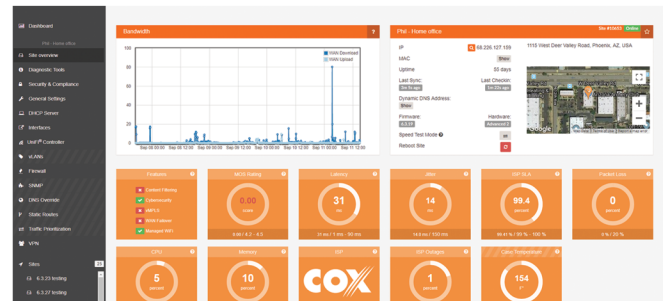

Are you ready to move workers home?

Why you need SD-WAN?

1. Security: Remote users networks are not secure, they become a gateway into your corporate environment and risk insurmountable damage. It only takes one family member to compromise your corporate security. Manage and control all of this through the SimpleWAN technology from a thousand miles away.

2. Application Prioritization: Home networks are not set up for business. Bad application performance is unproductive and frustrating. This includes voice (VoIP), video and cloud hosted collaboration software.

3. Diagnostics: 8 out of every 10 IT issues are normally network related. Unless the IT department plans on visiting every remote workers' house, every new issue will be an impossible mystery. The SimpleWAN dashboard can provide real time diagnostics and resolve network level issues quickly.

4. Secure Cloud Connections: Spin up a secure site to cloud connection in seconds or an entire virtual MPLS within seconds. No managing VPN's, no constant configuration issues.

SD-WAN @ Home resolves dozens of problems home workers encounter:

Security   VoIP

Remote Problem Solving   Multiple Cloud Connectivity

Options

4G LTE — Keep remote users connected to the Internet even if their home network is poor

Secure Private Cloud — Easily keep connected to offices and cloud infrastructure without VPN's

*Additional security services such as SOC, SIEM and UTM available

Includes:

Network Analytics

Security

QoS

Virtual MPLS

Advanced Diagnostic Tools

Visualization and Historical Tracking

Advanced Alerting

and it all deploys in seconds..
